

STALLION™ POWER

MANUFACTURED BY PHILATRON WIRE AND CABLE IN THE USA

COILED ELECTRICAL CABLES

ANATOMY OF THE PREMIER CABLE'S CONSTRUCTION

Sag-Proof Coil Memory
Tough Cable Jacket

Indestructible Xenoy Plugs
PATENT NO. 4,786,261
Corrosion Proof
Tight Fitting "D" Contacts

Locking Grip will not disengage from a pull force of up to 480 pounds.

XENYO PLUGS

INDESTRUCTIBLE

Stronger, more durable and reliable than metal, nylon and plastic.

CORROSION PROOF

Metal plugs corrode with bad weather and can freeze to socket. Xenoy plugs are guaranteed not to corrode or freeze to socket.

TEMPERATURE RANGE

Will hold up from -70° to +400°F.

LIGHT WEIGHT

The combination of truck vibrations, the heavy weight of metal plugs and metal to metal contact causes fast wear and tear to both sockets and plugs. The Xenoy plug is light and has a dampening effect that gives prolonged service, saving both plugs and sockets! Heavy metal plugs can drag on the ground causing damage. Lighter weight Xenoy plugs do not drag.

"D" CONTACTS

TIGHT FITTING

Other plugs have round contacts which lose contact after prolonged usage. "D" contacts have been tested for over 1,000,000 couplings without losing contact. This eliminates the problem of blinking lights.

PLATED

"D" brass contacts are tin plated to protect against corrosion. Many metal and nylon plug contacts are not plated. Take a closer look at what you are using! If you can see yellow, the contact is NOT plated.

WEATHER BARRIER

Many metal and nylon plug contacts do not have weather barriers. Take a closer look inside the holes of the plug that you are now using. You may see bare copper wire. This exposed copper wire can corrode easily in bad weather. "D" contacts protect wire against corrosion with a weather barrier. You will not see exposed wire in "D" contacts.

TOUGH CABLE JACKETS

WEATHER & ABUSE RESISTANT

Resists chemicals, cutting, abrasion, gasoline, ozone, water, SOLVENTS and sunlight.

Unlike COMPETITORS, our warranty does not come with a warning that it will be void if you use standard industry cleaners containing Methylene Chloride.

COIL MEMORY

SAG PROOF

Keeps a tight coil memory even after years of usage.

WORKING LENGTH

Superior design and cable construction allow STALLION cables to use a minimum length of cable to provide the working length you require. Less cable length means less voltage drop.

BOTTOM LINE

YOUR BENEFITS

- More Profits
- More Reliability
- Less frequent replacement
- Less down equipment
- Less plug & socket wear and tear

**CHEAPER ISN'T THE CHEAPEST!
